

Diaphragm valve, Plastic

Construction

The GEMÜ 617 manually operated 2/2-way diaphragm valve has a low maintenance plastic bonnet. An optical position indicator is integrated as standard.

Features

- Suitable for inert and corrosive* liquid and gaseous media
- The valve is insensitive to contaminated, abrasive media
- Integral optical position indicator
- Compact design
- Valve body and diaphragm available in various materials
- Optional flow direction and mounting position
- Versions according to ATEX on request

Advantages

- All medium wetted parts and the housing are made of plastic
- Good flow capability

* see information on working medium on page 2

Technical data

Working medium

Corrosive, inert, gaseous and liquid media which have no negative impact on the physical and chemical properties of the body and diaphragm material.

Ambient temperature

Valve body PVC-U / PP / PP-H	5 to 60° C
Valve body PVDF	-10 to 60° C

Working medium temperature

Valve body PVC-U	5 to 60° C
Valve body PP / PP-H	5 to 80° C
Valve body PVDF	-20 to 80° C

The permissible operating pressure depends on the working medium temperature

Data for extended temperature ranges on request.

Please note that the ambient temperature and medium temperature generate a combined temperature at the valve body which must not exceed the above values.

All pressures are gauge pressures. Operating pressure values were determined with static operating pressure applied on one side of a closed valve. Sealing at the valve seat and atmospheric sealing is ensured for the given values.

Information on operating pressures applied on both sides and for high purity media on request

	15	3.5

Kv values determined acc. to IEC 534 standard, inlet pressure 6 bar, Δp 1 bar, PVC-U valve body and soft elastomer diaphragm.
